Genius

Kolinsky

Bionic hair

The new and innovative, state-of-the-art bionic fibers are a real revolution in layering. The fineness, elasticity, and stability of the brush tip allow targeted layering of porcelain.

Kolinsky evo

Synthetic hair

To meet the requirements of today's dental labs, Renfert developed affordable synthetic brush tips that feel and handle like natural hair but with greater resilience and durability.

lay:art evo

lay:art evo is a state-of-the-art premium brush with bionic hair. Thanks to the chemical composition of the newly developed fibers and their specific processing, the brush bristles can absorb moisture and replicate the flame shape that is typical of high-end brushes.

Details:

Genius evo

Offering integrated protection in the handle, this premium quality brush impresses with its modern design. However, the Bionic Hair makes it truly special. The special molecular structure of the bristles allows moisture to be absorbed and is distinguished by outstanding longevity.

Details:

Kolinsky evo

Kolinsky evo, with its Bionic Hair, combines the benefits of a synthetic bristle brush with those of a natural bristle brush. The special molecular structure of the bristles allows moisture to be absorbed and is distinguished by outstanding longevity.

Details:

NEW lay:art micro

The lay:art micro set is a brush set specifically developed for micro-layering applications in ceramics and composites. Five coordinated brush geometries support the controlled handling of modern micro-layering materials, enabling the precise execution of 3D shaping, 2D staining, and internal staining techniques.

Details:

Ceramicus

Porcelain brush made from a special, synthetic microhair structure. Great resilience of the brush tip and very densely packed bristles. No bothersome splaying of the bristles after every porcelain build-up.

Details:

Takanishi

Very high quality synthetic bristle brush which has been well proven for many years for the optimal porcelain build-up. The stable tip and the highly flexible bristles make it ideal for reducing porcelain.

Details:

lay:art style

lay:art style natural hair brushes provide premium quality for the highest demands. An innovative manufacturing technique achieves maximum values in terms of tension, dimensional stability and durability of the brush tip.

Details:

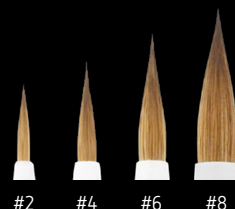

Genius

High quality, natural hair brushes in a modern design with a protective function integrated in the handle. In order for the brush hair to have a high level of strength, shape stability and longevity, Renfert uses a unique manufacturing technique.

Details:

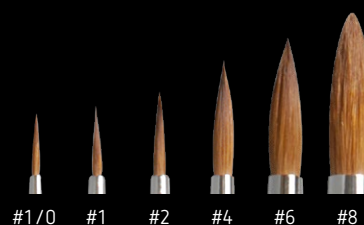

Kolinsky

Natural bristle brush made from Kolinsky red sable bristles, combining quality and aesthetics. Fine, flexible brush tip and optimum liquid reservoir.

Mixing trays with moistening system

lay:art crystal aqua

Partially self-moistening glass mixing tray with two moistening strips.

lay:art tropic pro

Homogeneous, diffusible high-tech porcelain tray with wells and continuous moistening.

lay:art tropic

Capillary action moistens the porcelain mixture homogeneously over the entire surface, tray includes two additional, glazed wells.

lay:art oasis

High-tech porcelain mixing tray with glazed surface and perforated wells. Automatic capillary moistening for processing and storing of dental ceramic materials.

Rainbow

Glazed palette material with perforated wells prevents the porcelain from drying-out during the working process.

Mixing trays without moistening system

lay:art crystal

Glass mixing tray in a modern design.

lay:art natural

Exclusive mixing tray made from natural agate stone.

Stain trays

lay:art color

Glazed ceramic tray for preparing and storing stains.

Stain-Mix

Stain mixing tray for porcelain and acrylic stains.
