

making work easy

The background of the advertisement is a close-up photograph of a dental procedure. A hand holds a small, white, irregularly shaped dental restoration. A dark-colored dental handpiece is positioned to polish the restoration with a large, dark, circular polishing wheel. The wheel is in motion, creating a blurred effect. The background is a soft, out-of-focus light blue.

Renfert Polish ZrO_2 starter kit

NEW Polishing kit for zirconium dioxide restorations

NEW Renfert Polish
ZrO₂ starter kit

Polishing kit for zirconium dioxide res-
torations

Renfert Polish ZrO₂ starter kit combines the es-
sential components for processing zirconia resto-
rations into a coordinated set. The polishing paste and
polishers are tailored to the material and typ-
ical indications, helping users carry out the polish-
ing procedure in a structured, controlled manner to
achieve reproducible results.

Advantages

- Efficient workflow: fast and uniform polishing of zirconium dioxide restorations for a reliably smooth surface.
- Material-friendly polishing: the three-step polishing system ensures consistent surface quality and delivers optimal high gloss.
- Long-lasting high gloss: polishers with perfectly matched geometries enable versatile use on monolithic and partially veneered zirconium dioxide restorations.

Details

- First prepolishing: Prepolisher ZrO₂
- Second prepolishing: Prepolisher twist ZrO₂
- High gloss polishing: Bison polishing brush + Renfert Polish ZrO₂ polishing paste
