

Renfert presents a new ceramic brush: longer service life with natural hair characteristics

lay:art evo: new premium brush with bionic hair

lay:art evo from Renfert (Hilzingen) marks a paradigm shift in ceramic brushes. Needs have changed in the daily laboratory routine when it comes to ceramics, and Renfert is responding to those changes. The newly developed Bionic Hair has an exceptionally long life, perfect moisture management and a precise tip. As a pioneer, the lay:art evo offers next level ease of work - „making work easy“.

lay:art evo impresses with incredible dental product detail and pragmatic functionality. Thanks to innovative bionic hair technology, the new premium brush combines all the requirements of modern laboratory tasks.

Tip-top

The bionic hair confers a unique quality and remarkable longevity to the brush. The fineness, elasticity, and stability of the brush tip allow targeted layering. Thanks to greater tension and stiffness, even the smallest quantities of ceramic can be taken up and applied perfectly. At the same time, the special molecular structure allows it to absorb moisture and replicate the typical flame shape. Together, both of these aspects demonstrate the characteristic moisture management, which also distinguishes natural bristle brushes.

A solid grip on quality

The lay:art evo also offers impressive haptics. The surface of the handle is made from premium quality anodized aluminum. The handpiece is lightweight and well-balanced in the middle. Ergonomic design and low weight ensure easy, relaxed handling during layering. Robust quality handle material and refills predestine lay:art evo as a lifelong companion.

The lay:art evo with Bionic-Hair represents the bridging of nature and technology: inspired by the gracefulness and precision of a natural hair brush; optimized for the economic requirements (longevity) and ecological demands (species protection) of the modern dental lifestyle. The lay:art evo meets all the requirements of a premium brush and sets new standards; a typical feature of Renfert „making work easy“.
