

POWER steamer – the steam cleaning unit that sets new standards in reliability

Renfert has done it – with the POWER steamer. The first steam cleaning unit on the market to show just how well intelligent engineering works. Refined down to the smallest detail, the POWER steamer is truly a champion steamer. This new generation of steam cleaning units makes your daily laboratory routine that little bit easier. With this innovation, Renfert has set another milestone in premium quality laboratory equipment – “making work easy”.

With the POWER steamer, dental laboratories can take steaming to a new level. The steam cleaning unit with its maintenance-free heating element and intelligent engineering enhances your laboratory equipment with smart functions, an attractive design, and reliable steaming performance. The heart of the unit is the boiler where the heating element is cast inside the aluminum floor. This is a real feat of engineering that makes the heating element virtually indestructible. Another unique detail: the extra-large service opening in the pressure tank ensures convenient rinsing and descaling. Full steam ahead in your daily laboratory routine – this powerful unit maintains full power. Thanks to the robust heating element, only a short heating interval is required, with fast and continuous reheating too. What’s more, user-friendly handling and the services that users expect of Renfert have transformed a no-nonsense piece of everyday equipment into a champion performer that’s clever too.

Augmented Reality (AR) app: Projecting the POWER steamer in the laboratory

You can meet the POWER steamer for the first time, visualizing it as a 3D model in the dental laboratory. Simply install the AR-app and see the device in a laboratory environment. Moreover, on the Renfert website you can find a virtual 3D model with clear product descriptions and animations explaining how it works.
